

## **Kios Research Centre summer research**

The KIOS Research Centre for Intelligent Systems and Networks of the University of Cyprus has announced the selection of five students to participate in the Undergraduate Research Opportunities Programme (UROP), organised for summer 2014.

According to an announcement, the students selected are Ioannis Chadjiminias, Christina Kiliili, Antreas Kouloumbri, Andreas Pallis and Panayiotis Tsangarides.

This is the sixth year that KIOS has operated the programme at the University of Cyprus and the programme has received significant international attention. This year KIOS received around 100 applications from students in Cyprus and abroad.

The selected students will participate with the KIOS Faculty and Researchers in technological research projects which contribute to the advancement of knowledge in the area of Information and Communication Technologies. Application areas for these types of technologies include renewable energy, water telecommunication and transportation networks, as well as ICT for health and the protection of the environment. This type of programme is modelled on international best-practice and is adopted in other reputable academic institutions and research centres in order to encourage and develop the confidence of young talented students to contribute to research and innovation.
